

Vancouver Airport Fuel Delivery Project

PUBLIC INFORMATION SESSIONS

Vancouver Airport Fuel Facilities Corporation (VAFFC) invites the public to learn about the proposed new aviation fuel delivery system for Vancouver International Airport (YVR).

The proposed project consists of a marine terminal and fuel receiving facility on the south arm of the Fraser River, and an underground fuel pipeline connecting the receiving facility and YVR. The 15-km pipeline is expected to travel under existing transportation corridors in Richmond, with several alignment options under consideration.

As the first stage of consultation, VAFFC is holding information sessions to explain the proposed project to the public, First Nations and other stakeholders prior to submitting an application to the BC Environmental Assessment Office for an Environmental Assessment Certificate.

INFORMATION SESSIONS:
