Questions for staff:

The 8" minus gravel was used as a base for the middle dyke and roadway and then covered with a smaller gravel will this smaller gravel be the top coat used for making the dykes accessible with wheel chairs and strollers ?

The Clay placed on either side of the gravel dyke is quite soft and mucky , will it compress over time ?

The Organic mulch top coat on top of the clay has mulched branches, and some concrete, bricks and plastic contaminates, will future loads be more organic and clean?

The large piles of gravel and mulch located on the west side of the Garden City Lands will that be distributed or is it staying in place ?
